

Your Money or Your Life: Strong Medicine for America's Health Care System

David M. Cutler
Harvard University

April 2005

About health care passivity...

- I have but this to say:

"Speaking for myself, I too believe that humanity will win in the long run. I am only afraid that at the same time the world will have turned into one huge hospital"

- Goethe, May 1787 letter

It's Time to Vote (Again?..)

- True or False: There is a fundamental conflict between rising medical costs and insuring the uninsured.
- Agree or disagree: I would forgo all future medical advances if we could enact, now and forever, universal insurance coverage.
- Agree or disagree: Thank God for the Schiavo legislation. I feel a lot more secure.

The Holy Trinity of Health Reform

- Costs: We spend too much.
- Access: Insure the uninsured.
- Quality: Quality is uneven.

Common Solutions Fail Because They Produce Conflict Among Goals

- Save money and cover more people (aka the Clinton Plan)
 - That means cutting back on the insured to give to the uninsured
- Improve quality through IT investment, malpractice reform (aka the IOM Plan)
 - How can we afford it?

Central questions

- What do we get for increased medical spending?
 - Conventional wisdom: Very little
 - My answer: An enormous amount. There is no "speed limit" to spending even more.
- What can we do to reform the system?
 - Conventional wisdom: ???
 - My answer:
 - 1) Expand insurance coverage
 - 2) Get even more value by paying for quality.
- *It's the value, stupid.*

The Full-Length Version

- This talk is based on my research over the past decade, which I have written a book about.

Outline

- The value of medical spending
 - It's worth it.
- Can we sustain it?
 - Yes.
- Can we do better?
 - Yes, if we transition to paying for poking and prodding to paying for performance.

The Rise of Modern Medicine

Why do we spend more on medical care?

- Because we can do more.
 - Price increases are a small part of the story
 - Quantity and quality increases are
- Examples:
 - Cardiovascular disease
 - Low birth weight babies
 - The mentally ill

Changes in Medical Care for Severe Heart Disease (MI)

- | | |
|---|--|
| <ul style="list-style-type: none">■ 1950 Standard<ul style="list-style-type: none">■ Bed rest (6 mos +) | <ul style="list-style-type: none">■ Today's Standard<ul style="list-style-type: none">■ Pharmaceuticals to restore blood flow;■ Intensive diagnostic therapies■ Invasive revascularization |
| <ul style="list-style-type: none">■ Cost ~ \$0 | <ul style="list-style-type: none">■ Cost ~ \$30,000 in present value at age 45 |

Changes in Medical Care for Low Birth Weight Infants

- | | |
|---|--|
| <ul style="list-style-type: none">■ 1950 Standard<ul style="list-style-type: none">■ First incubators, experimentation with warming, etc. | <ul style="list-style-type: none">■ Today's Standard<ul style="list-style-type: none">■ Neonatology unit; artificial surfactant; ventilators; etc. |
| <ul style="list-style-type: none">■ Cost ~ \$0 | <ul style="list-style-type: none">■ Cost ~ \$70,000 in present value. |

Changes in Medical Care for People with Depression

- 1950 Standard
 - Mental institutions for very ill; little for others
 - Lobotomy, ECT, Insulin therapy
- Today's Standard
 - SSRIs

Costs have doubled in the past 20 years, as we treat more people

What Are the Benefits?

- Mortality
- Quality of life

The Single Biggest Factor in Reduced Mortality -- Cardiovascular Disease

Life expectancy at age 45 increased by 4½ years.

Infant Mortality by Birth Weight

LBW mortality has fallen by 75% since 1950

Fewer elderly have impairments in personal or living functions

Decline between 1.0 and 1.5 percent per year.

Matching Benefits and Costs -- Cardiovascular Disease

- Benefits
 - About **3 years** of longer life (4½ in total for CVD) is a result of medical advance.
- Costs
 - Spending on CVD is about **\$30,000** in present value from age 45 on.

Is it worth it?

What's A Life Worth?

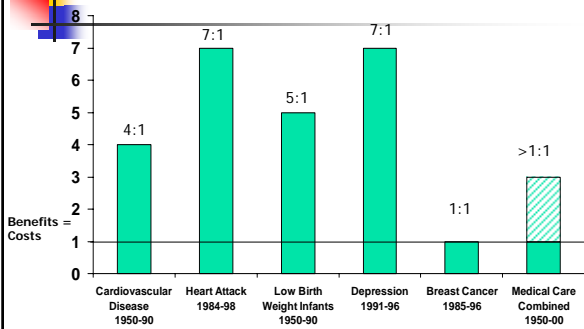

- Health is priceless
 - Well, not really
- How much are you willing to pay for an air bag, or a better braking system in your car?
 - \$300 for an airbag → \$100,000 per year of life saved.

Analysis of Cardiovascular Disease

- Benefits
 - Present value is about **\$120,000**
- Costs
 - Increased spending of about **\$30,000**.

Rate of return is **4:1**

The Mortality Benefits of Medical Advance Are Significantly Greater than the Costs

The Key

- People value their health highly
 - Two-thirds of Americans rank health care as a top item for an expanding economy.
- Medical advance costs a lot, but is worth it.
 - That's why the 'R' word (rationing) is not utterable in the States.

Sustainability

Can We Afford to Continue?

- Will there be valuable medical things to buy in the future?
 - Yes (likely)
- What would we give up by devoting more resources to medical care?
 - Medical care would take a large share of spending *increases*, but non-medical consumption would still rise.

Expected Changes in Medical and Non-Medical Consumption

What's the big worry?

- When IT grows as a share of the economy, that's good.
- When health care does the same, that's bad.
- Why?

What's the big worry?

1. Government budgets
 - Government will need more money
 - Perhaps a dedicated financing stream for medical care

What's the big worry?

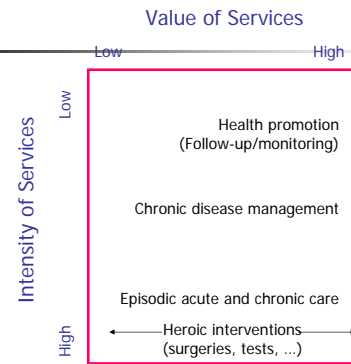

2. Those left out
 - *Step 1 in health reform: Cover everyone*

What's the big worry?

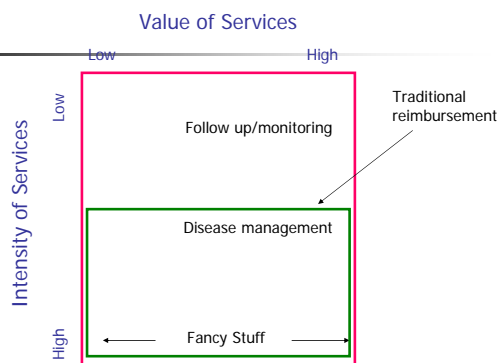

3. Waste

- Yes, but...
- Waste and value are the Dr. Jekyll and Mr. Hyde of health care.

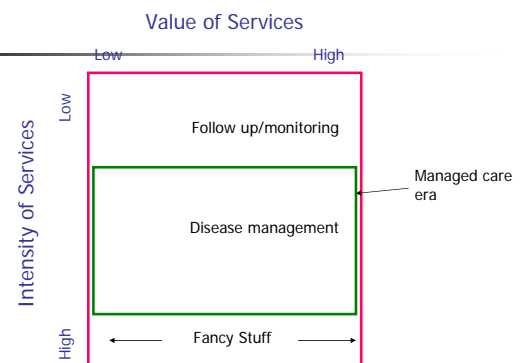

Waste and Value

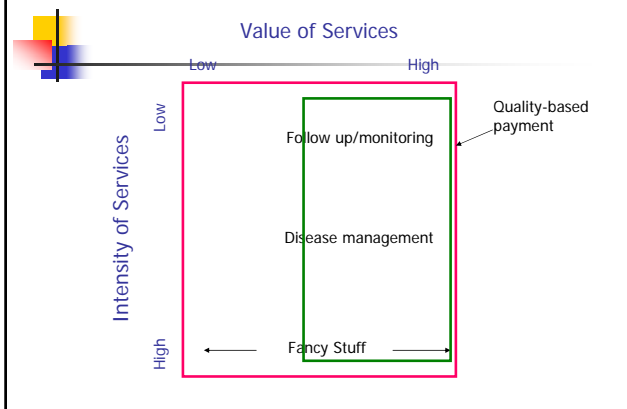

Waste and Value

Waste and Value

Waste and Value

Step 2 in health reform

2. Transition to a pay-for-performance system

- Add 5 percent to Medicare payments via a Quality-improvement fund
 - Assign points for meeting quality standards and take away points for missing them, with funds awarded based on annual points.
 - Measures of quality: Process, Outcomes, Satisfaction
- Lower patient cost sharing for effective care.

A Vision of the Future Health System

- Has less wasteful care and more valuable care.
 - Overall spending may be higher or lower
- Has sustained cost increases, for new technologies.
 - Makes sure financing system is stable
- Insures everyone.
- Challenges and rewards for high *value*.
